

# Single-Source™ I, II & III Warranties— Premier Programs for the Ultimate Quality Guarantee

Our Single-Source™ Warranty Programs help to ensure the integrity of your roof unlike any other in the industry. That is because we take an active role in the application of the roofing system before, during and after construction.

Single-Source™ programs require that:

- The roof design is reviewed to ensure that the geometry meets the warranty requirements before installation begins
- The roof is properly installed before the warranty is issued
- The building owner is satisfied with the constructed roof system

We offer three levels of Single-Source™ Warranties depending on the amount of protection the building owner requires (See Warranty Liability Chart).

Single-Source™ Weathertightness Warranties assign our company full responsibility for the roof system for the duration of the warranty. Should a claim ever be filed, the building owner need only make one call – to us and us alone. Our solution virtually eliminates the frustration of having to contact and involve multiple parties to process the claim.

All Single Source™ Warranties require that a Certified Installer, with photo ID, be present on the jobsite during all roofing activities. In addition inspections will be required at key intervals while the roof is being installed.

These inspections will be conducted by highly proficient inspectors, knowledgeable in all aspects of our Standing Seam Roof Systems – so you can rest assured that your roof will be built correctly and backed by our word.

## Single-Source™ Warranty Liability

Warranty Type	Maximum Liability
Single Source I	7.00 Per Square Foot

## Covered Panel Profiles— By Single-Source™ and Standard Weathertightness Warranties

These panels may not be warrantable in all environmental conditions, designs or with some building geometries. Please consult your nearest sales office.

With every building, our goal is to make sure the roof is properly installed. We believe that a comprehensive roof inspection program is essential in order to achieve that goal. Our intent is to team up with the Design Professional, Roofing Contractor and/or the Builder to achieve the best possible outcome: A well built, leak-free roof and a satisfied building owner.

Over the years, we have invested millions of dollars designing and testing our products and developing in-depth installation manuals. These manuals are the most complete and easy-to-understand in the industry and give your Certified Installer a clear path to accurate roof installation.

In addition, issuance of the Single-Source™ Warranty requires that the installation be supervised by a certified professional – giving you and the owner a peace of mind in knowing that the roof was properly installed.

# Single-Source™ Customer Agreement— **Establishing a Lasting Partnership for a Lasting Warranty Solution**

The path to a lasting construction solution begins with the creation of our Customer Agreement. Prior to finalizing a warranty program, one of our representatives will work with you to complete this contract, which clearly defines the responsibilities of all involved parties.

Not only does this keep you informed about the obligations you must facilitate in order to execute the terms of the warranty, but it also clarifies what our company's responsibilities will be moving forward. This way, there is no question as to who will be handling such issues as safety, inspections, installation and equipment.

In the end, the Customer Agreement is key to ensure that all parties are working together to achieve the best possible application of the roofing system. Most important, it represents a partnership built on a foundation of commitment to quality and superior performance.

Before you get started on your next construction project, make sure you provide a building with the utmost integrity. To find out how, call on our warranty experts today.
